270-DAY BATTLE PLAN

CFV CoinFund: $21 Billion Across Three Tokenized Funds

Fund I: $1B (Days 1–90) | Fund II: $5B (Days 91–180) | Fund III: $15B (Days 181–270)

80% Coin Acquisition (Locked Permanently)
20% Management, Listings, Wallets, Lobbying, Conferences & Grants

Tokenized on Chia Blockchain | Anchored by Arizona SB 1649

10-Person Team | 2,146 Small Asset Managers | $352B Collective AUM

FUND ECONOMICS: THE 80/20 STRUCTURE

Capital Allocation

Each of the three CoinFunds splits every dollar raised into two pools: 80% is deployed into the 12 coins in equal amounts and locked in a multi-signature wallet controlled by the fund. 20% is the management pool, covering team operations, exchange listings, wallet and POS integration development, Merkle tree audit compliance, and ecosystem grants. This mirrors the standard 2-and-20 venture fund structure calculated over a ten-year fund life (2% annual management fee x 10 years = 20%).

	Fund I ($1B)	Fund II ($5B)	Fund III ($15B)	All Three
Total Raise	$1,000,000,000	$5,000,000,000	$15,000,000,000	$21,000,000,000
80% → Coin Purchases	$800,000,000	$4,000,000,000	$12,000,000,000	$16,800,000,000
20% → Management Pool	$200,000,000	$1,000,000,000	$3,000,000,000	$4,200,000,000
Per Coin (12 coins, equal)	$66.7M	$333.3M	$1,000.0M	$1,400.0M
Cumulative Per Coin	$66.7M	$400.0M	$1,400.0M	—

Token Mechanics (Chia Blockchain)

Issuance: Each dollar of committed capital is represented by one token issued on the Chia blockchain. Fund I issues up to 1 billion tokens. Fund II: 5 billion. Fund III: 15 billion.

Trading: Tokens may only be traded on the Chia blockchain and only between verified accredited investors. No public exchange trading. No transfer to non-accredited parties. Tokens continue to exist and trade indefinitely.

First Trade — Management Fee Recovery: When a token is sold for the first time, the 20% management fee must be recovered before any profit is calculated. If an investor bought tokens at $1.00 each and sells at $1.50, the first $0.20 covers the management fee. The remaining $0.30 of profit is subject to 20% carried interest ($0.06 to fund manager). Net to seller: $1.24.

Years 1–10 Carried Interest: 20%. Every trade of a token during the first ten years pays 20% of any profit to the fund manager. This is automatically calculated and collected through mechanisms embedded in the Chia blockchain smart contract.

Year 11+ Carried Interest: 2.1%. Beginning in Year 11, the carried interest drops to 2.1% of profit on each trade and remains at that level indefinitely. This provides permanent, sustainable revenue to the fund manager while dramatically reducing the cost of trading for token holders.

COINS ARE LOCKED FOREVER: The coins acquired by each fund are held permanently in multi-signature wallets controlled by the fund. They are never sold. They are never distributed. They are never redeemed. The coins remain locked indefinitely, creating permanent scarcity for all 12 coins. This eliminates the dumping risk that destroys value in funds that distribute underlying assets. The tokens represent a permanent, tradeable claim on locked coins whose scarcity only increases over time.

No Fund Dissolution: Unlike traditional venture funds with 10-year fund lives, the CoinFunds do not dissolve. The coins stay locked. The tokens stay tradeable. After Year 10, the carried interest

drops from 20% to 2.1%, making trading more attractive for token holders while maintaining a permanent revenue stream for the fund manager.

Coin Custody: All coins are held in multi-signature wallets. No single key holder can move coins. Custody meets the “secure custody solution” standard defined in SB 1649: geographically diversified data centers, multiparty governance, end-to-end encryption, regular code audits, penetration testing, and disaster recovery protocols.

The Permanent Scarcity Thesis

This structure removes coins from circulation permanently. Across all three funds:

Fund I: $66.7M of each coin locked forever.

Fund II: $333.3M more of each coin locked forever.

Fund III: $1,000M more of each coin locked forever.

Cumulative: $1.4 billion per coin permanently removed from circulation. $16.8 billion total across 12 coins. These coins never re-enter the market. As circulating supply decreases and adoption increases (driven by the 20% pool’s exchange listings, wallet/POS integration, lobbying, conferences, and ecosystem grants), the price pressure is one-directional. The buy pressure from the 80% pool raises prices. The permanent lock prevents selling pressure. The 20% pool’s ecosystem spending grows fundamentals. All three forces push CFV upward simultaneously.

The 20% Management Pool: What It Funds

The management pool is not just salaries. It is the operational engine that drives coin adoption—which drives CFV—which drives token value. Every dollar spent from this pool is designed to increase the fundamental metrics (adoption, transactions, transaction value, developer ecosystem) that the CFV model measures.

Category	Fund I ($200M)	Fund II ($1B)	Fund III ($3B)	Purpose
Team/Ops/Legal (25%)	$50M	$250M	$750M	Salaries, office, legal, compliance, accounting, reporting
Exchange Listings + Audits (15%)	$30M	$150M	$450M	List all 12 coins on major CEXs/DEXs in crypto-friendly jurisdictions. Fund Merkle tree audits of exchanges showing holder counts and trade data.
Wallet & POS Integration (25%)	$50M	$250M	$750M	Fund mobile wallet development. Integrate Verifone APIs and top-10 POS systems (Square, Clover, Toast, etc). Enable all 12 coins to be spent everywhere credit/debit/Apple Pay/Google Pay are accepted.

Ecosystem Grants (5%)	$10M	$50M	$150M	Grants to developers, community initiatives, merchant adoption programs for each of the 12 coins. Directly grows the developer ecosystem metric (10% of CFV weight).
Lobbying (25%)	$50M	$250M	$750M	State and federal lobbying to advance SB 1649-style legislation in all 50 states. Promote sound money policy, competing currencies legislation, and CFV/DGS recognition at the state and federal level.
Conferences (5%)	$10M	$50M	$150M	Host and sponsor conferences promoting the 12 CoinFund coins, the CFV model, and the DGS Benchmark. Direct engagement with SAMs, RIAs, legislators, exchanges, wallet providers, and merchants.

The Virtuous Cycle: Why the 20% Pool Multiplies the 80%

The management pool creates a self-reinforcing cycle that no other crypto fund replicates:

Exchange listings → more people can buy/hold the coin → adoption metric rises → CFV rises → token value rises

Wallet/POS integration → more merchants accept the coin → transaction count and transaction value metrics rise → CFV rises → token value rises

Merkle tree audits → verified holder counts replace guesswork → adoption metric becomes defensible → CFV gains credibility → more SAMs invest → more capital enters the next fund

Ecosystem grants → developer ecosystem metric rises → CFV rises → and the coin's technology actually improves, attracting organic adoption

Lobbying → SB 1649-style legislation advances in more states → state treasuries authorized to hold qualifying coins → institutional adoption rises → adoption metric rises → CFV rises → more states adopt → cycle accelerates

Conferences → direct engagement with SAMs, RIAs, exchanges, wallet providers, legislators, and merchants → drives new SAM commitments, new exchange listings, new merchant adoption, and new legislative momentum simultaneously

The 20% is not a cost. It is an investment that directly increases the value of the 80%. This is the pitch to SAMs: "Every dollar of management fee is spent making the coins in the fund more valuable, more liquid, and more widely accepted."

THE SB 1649 WEAPON

Arizona SB 1649 passed the State Senate and is expected to pass the House. Even if the Governor vetoes, the bicameral vote is on the public record. The bill:

Names the Digital Gold Standard Benchmark and Crypto Fair Value by name in Arizona Revised Statutes.

Defines CFV using the exact four metrics: adoption by coin owners, annual transactions, annual transaction value, and development ecosystems.

Names 10 of our coins as qualifying digital assets: DigiByte, XRP, DASH, EGLD, ICP, NEAR, RVN, Chia, XEC, XMR, XNO. Every coin in the CoinFund portfolio except DGD and ZCL appears in the bill, but it validates the DGSB and CFV used with DGD and ZCL.

Authorizes the Arizona State Treasurer to hold, invest, and lend qualifying digital assets from the Digital Assets Strategic Reserve Fund.

Section 3 Legislative Findings state that the DGS benchmark “was established when the market valued the first cryptocurrency, BTC, at $100,000 per coin” and that CFV “ensures competition is truthful, transparent and fair.”

No other crypto fund in history can say their valuation model has been voted into law by any legislative body. This is your unfair advantage.

If the Governor Vetoes

The Senate vote stands on the public record. A majority of Arizona’s elected state senators voted to codify your model.

If the House also passes, you have bipartisan, bicameral support on the record for the CFV model —regardless of the veto.

A veto creates a media moment that a quiet signing would not. “Governor vetoes the first state bill to codify crypto fundamentals into law.”

The bill text is public. Other states can adopt it verbatim. The template is set.

TEAM: 10 PEOPLE

Role	#	Responsibilities
Campaign Commander + Compliance/Legal + Legislative Liaison (YOU)	1	Overall strategy. Podcast host. ALL compliance & legal: 506(c), accredited verification, PPM, sub docs, token issuance, Chia blockchain compliance. Legislative coordination with Finchem/Hagedorn/Wood. Track SB 1649. New state targets. Close every $10M+ commitment personally. 30+ calls/day when on phones.
SAM Outreach Director	1	CRM pipeline management. Territory oversight. Weekly pipeline reviews. 20+ calls/day to $100–150M AUM SAMs. Trains 3 associates.
SAM Outreach Associates (x3)	3	Each owns ~715 SAMs. 40 calls/day each = 120/day total. Cold calls, follow-ups, webinar invites, data room access, subscription processing.

Social Media & Content Director	1	All content: 3 X posts/day, daily LinkedIn, 3 YouTube clips/week. SB 1649 graphics, CFV infographics, coin sheets, Beyond Bitcoin excerpts. Engagement management.
Podcast Producer	1	Books guests, prepares briefings, records/edits/publishes. 5–7 clips per episode. Distribution: X, YouTube, Apple, Spotify.
Investor Relations & Data Room	1	LP onboarding, sub doc processing, data room, token issuance coordination, K-1s, quarterly reports. New-client intake for SAMs.
Operations & Data Analyst	1	CFV model data. Coin metrics. Exchange order book analysis. SAM pipeline analytics. Performance dashboards. Deployment planning.
Executive Assistant	1	Your scheduling/travel. CRM data entry. Document management. Meeting coordination.

Daily calling capacity: 5 callers x 30–40 calls/day = 150–200 calls/day. Entire 2,146-SAM list gets first contact within 11–15 days.

THE MATH: $1B IN 36 SELLING DAYS

The fund opens Day 54. You have 36 days (Day 54–90) to close $1 billion. Days 1–53 are pure arsenal-building, pipeline-warming, and pre-selling. Every SAM has been contacted 4+ times before the fund opens.

SAM Universe & Target Allocations

AUM Tier	Firms	Avg AUM	Allocation	Avg Commit	20% Convert	New Client Sweetener
$200–250M	83	$225M	4%	$9.0M	$149M (17)	Each gains 15–25 new clients from podcast/social funnel
$150–200M	137	$175M	4%	$7.0M	$192M (27)	Each gains 15–25 new clients
$100–150M	431	$125M	3.5%	$4.4M	$377M (86)	Each gains 10–20 new clients
$50–100M	765	$75M	3%	$2.3M	$344M (153)	Each gains 5–15 new clients
Under $50M	729	$30M	3%	$0.9M	$131M (146)	Each gains 5–10 new clients
TOTAL	2,146	$164M avg	3.3%	$4.5M avg	$1.19B (429)	Thousands of new clients across all SAMs

At 20% conversion you hit $1.19B—exceeding the $1B target. You need approximately 200 SAMs at $5M average, which is 5–6 SAMs closing per selling day.

The New-Client Sweetener

Non-accredited investors legally must invest through a SAM. Accredited investors who prefer managed accounts will also route through SAMs. Every investor driven to the fund through the podcast, social media, or SB 1649 coverage who chooses a SAM becomes that SAM's new client—with new AUM, new management fees, and a long-term relationship the SAM didn't pay to acquire.

A SAM who commits $5M of existing client capital AND gains 20 new clients at $100K each ($2M new AUM) grows their book by $7M. At 1% management fee = $70K/year in new recurring revenue. You are paying them to participate.

The Price Impact Thesis

Fund I deploys $66.7M per coin into 12 coins. Most of these coins (DGB, XNO, ZCL, RVN, XEC) have total daily volume well under $10M. When $66.7M of buy pressure enters these order books, it absorbs every ask on every exchange. Conservative estimate: 10X on most coins. Fund II adds $333.3M per coin—another 10X. Fund III adds $1B per coin—at least 5X. Cumulative: $1.4B per coin across all three funds. By Fund III, these coins approach their CFV fair values.

But the management pool's exchange listings, wallet development, and POS integration simultaneously drive organic adoption—growing the very metrics that determine CFV. The buy pressure raises prices. The ecosystem spending raises fundamentals. Both raise CFV. This is the double engine.

PHASE 1: BUILD THE WAR MACHINE (Days 1–30)

Every day exists to ensure that when the fund opens Day 54, every SAM has been contacted multiple times, has all materials, understands SB 1649, the 80/20 structure, the token mechanics, and the new-client pipeline.

Week 1: Stand Up Everything (Days 1–7)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
1	Kickoff all 10. Distribute Beyond Bitcoin + SB 1649 full text. Stand up CRM, Slack, shared drive, data room. Brief team: 270-day plan, 80/20 structure, token mechanics on Chia, 3-fund leapfrog, price impact thesis, new-client sweetener, exchange listing strategy, wallet/POS roadmap.	All 10	Systems live	—	—
2	Load 2,146 SAMs into CRM. Tag: state, AUM tier, phone, email, LinkedIn. Priority 1: AZ/TX/FL/UT/TN/ID/OK/WY/NH (410 firms, $31.2B). Priority 2: CA/NY/CO/MA/IL/CT (1,339 firms, $220B+). Priority 3: remaining states (397 firms, $101B).	SAM Dir + Analyst	CRM loaded	—	—
3	Territory assignment. 3 associates x ~715 SAMs each. SAM Director handles top 50 by AUM + oversees all. You call $200M+ firms personally when on phones.	SAM Director	Territories set	—	—
4	Draft Pitch Deck v1: (1) SB 1649—model voted into law; (2) CFV formula + DGS; (3) 80/20 structure—where every dollar goes; (4) Token mechanics on Chia; (5) 12 coins + price impact; (6) Management pool—exchange listings, wallet/POS, audits, grants; (7) New-client pipeline for SAMs; (8) Fund terms; (9) Team + 3 legislators; (10) 270-day leapfrog.	YOU	Deck drafted	—	—

5	Build data room: PPM, sub agreement, LP agreement, accredited investor questionnaire, SB 1649 full text + vote record, CFV documentation, Beyond Bitcoin digital, compliance memo (you write), new-client intake form, token mechanics explainer, management pool allocation breakdown, Chia blockchain overview.	YOU + IR	Data room live	—	—
6	Social media goes live. Anchor post: SB 1649 Section 3 legislative findings image + “First time in U.S. history a state senate voted to codify a crypto valuation model into law.” Launch SB 1649 Fact of the Day. Cadence: 3 X posts/day, daily LinkedIn, 3 YouTube clips/week.	Social/Content	Calendar live	—	—
7	Book first 10 podcast episodes. Wk 2–3: Finchem (SB 1649), Hagedorn (Navy/sound money), Wood (tribal sovereignty). Wk 4–5: 2 coin founders. Wk 6–7: 3 new-state legislators. Wk 8: first SAM testimonial.	Producer	10 eps booked	—	—

Week 2: Build Every Weapon (Days 8–14)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
8	Record Ep 1: Finchem—SB 1649 deep dive. Walk through every section. He reads legislative findings aloud. Name every coin. Explain what it means for state treasuries. This is weapon #1 for 82 days.	YOU + Producer	Ep 1 recorded	—	—
9	SAM One-Pager: “The Only Crypto Fund Whose Model Passed a State Senate.” SB 1649 summary, 80/20 structure, 12 coins, per-coin buy pressure ($66.7M), new-client benefit, token mechanics, contact. Both sides, 1 page.	IR + Social	One-pager done	—	—
10	You write Compliance Memo: 3 pages. SB 1649 text, vote record, CFV methodology, 506(c) structure, accredited/non-accredited pathways (non-accredited must go through SAM), token mechanics, Chia blockchain compliance, custody security (multi-sig + SB 1649 secure custody standards).	YOU	Memo done	—	—
11	Record Ep 2: Hagedorn—Navy intelligence, semiconductor patents, 6 pillars of perfect money, why a cryptologist trusts CFV. Connect military-grade security thinking to multi-sig custody and Chia blockchain.	YOU + Producer	Ep 2 recorded	—	—

12	6 email templates: (A) Cold intro—SB 1649 + new clients + 80/20; (B) Follow-up—podcast clip; (C) State-specific; (D) Data room invite; (E) Subscription push (Day 54+); (F) Compliance officer—attaches memo.	SAM Dir + YOU	Templates done	—	—
13	12 coin fact sheets: 1 page each. CFV calc, price vs. fair value, key metrics, SB 1649 status, exchange listing plan, $66.7M buy pressure analysis, current order book depth.	Analyst + Social	12 sheets done	—	—
14	Release Ep 1. 5–7 clips. Pin Finchem reading SB 1649 findings. LinkedIn: “Arizona told the world how to value crypto. Here’s the bill.”	Social	Ep 1 live	—	—

Week 3: First Contact Blitz (Days 15–21)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
15	OUTREACH BEGINS. 150+ calls. “The AZ Senate passed a bill naming our crypto model in law. We’re opening a $1B fund. 80% buys 12 coins, 20% funds exchange listings and wallet/POS integration. SAMs who join get new clients routed to them. Can I send the one-pager and the bill?”	5 callers	150 calls/emails	150	—
16	Record Ep 3: Rep. Wood—tribal sovereignty, monetary freedom, competing currencies, Oklahoma perspective on SB 1649.	YOU + Producer	Ep 3 recorded	300	—
17	150+ calls. LinkedIn connection requests to SAM principals: “AZ Senate voted to codify a crypto valuation model. Our fund uses it. Would love to share.”	5 callers	150 calls + LI	450	—
18	Release Ep 2. Social blitz: “Why a Navy cryptologist trusts crypto fundamentals.” Target LinkedIn: advisors, RIAs, compliance. 150 calls continue.	Social + callers	Ep 2 live, 150 calls	600	—
19	150+ calls. Follow up Day 15–16 non-responders with Ep 2 clip. AZ SAMs (11 firms): send compliance memo directly to compliance officers.	5 callers	150 + follow-ups	750	—
20	WEBINAR 1: 45 min. Finchem live 15 min on SB 1649. You: CFV model with live data, 80/20 structure, token mechanics, new-client pipeline. Q&A. Record for replay.	YOU + Finchem	Webinar 1	800	—

21	Release Ep 3. Launch Sunday with the Senators X Spaces 2pm EST—all 3 legislators + Q&A.	Social + Hosts	Ep 3 live, Spaces	800	—

Week 4: Saturate the List (Days 22–28)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
22–24	FULL BLITZ: 150/day x 3 = 450. Expand to Priority 2 (CA 477, NY 439). Customize by state. For TX (165) and FL (158): reference state reserve legislation. Every SAM gets first contact by Day 28.	5 callers	450 calls	1,250	—
25	Record Ep 4: Coin founder (Cohen/Chia or Tate/DGB). Show CFV calc live. Show order book depth. Show what $66.7M does. Reference SB 1649 listing.	YOU + Producer	Ep 4 recorded	1,400	—
26	Release Ep 4. Launch Beyond Bitcoin Book Club on X. Chapter 1. Continue 150/day. Schedule Zoom calls with all engaged SAMs for Weeks 5–7.	Social + callers	Ep 4 live	1,550	—
27–28	300 more calls. All Priority 3 states. By Day 28: 1,800+ contacted once. Second pass on Week 3 non-responders.	5 callers	300 calls	1,800	—

DAY 28 CHECK: 1,800+ SAMs contacted. 4 episodes live. 1 webinar. X Spaces running. 100+ SAMs expressed interest.

PHASE 2: PRE-SELL & LOCK $1B IN VERBAL COMMITS (Days 29–53)

25 days to convert interest into $1B+ in verbal commitments that become signed subscriptions the moment the fund opens Day 54. Every engaged SAM gets a one-on-one call, an IC presentation offer, and a clear ask: “What amount are you prepared to commit on Day 54?”

Weeks 5–6: Deep Engagement (Days 29–42)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
29–31	YOU: 8–10 Zooms/day with $150M+ SAMs. Walk through data room. Lead with SB 1649. Explain 80/20—show exactly where the 20% goes (listings, wallets, POS, audits, grants). Show how it grows CFV. Offer IC presentation with legislator.	YOU + IR	24–30 deep calls	1,900	$80–120M verbal
32	Record Ep 5: TX or FL legislator. State reserves, crypto-friendly states. “Would you sponsor SB 1649 in your state?” TX = 165 SAMs. This ep is a weapon for Associate 1.	YOU + Producer	Ep 5 recorded	1,950	$120–150M

33	WEBINAR 2: “How to Present Crypto Fundamentals to Compliance.” Walk through memo. Show SB 1649. Provide SAM Action Kit: one-pager, memo, SB 1649 text, deck, 12 fact sheets, new-client intake form, 80/20 breakdown, token mechanics doc.	YOU	Webinar 2 + Kit	2,000	$150–180M
34–36	IC PRESENTATIONS begin. You + legislator on Zoom. 2/day = 6 this block. These are $5–15M commits. 150 calls/day continue. Full list contacted 2x by Day 35.	YOU + Legs.	6 IC presents	2,146 (2x)	$200–280M
37	Record Ep 6: Coin founder (Tate/DGB, Séchet/XEC, or Williams/ICP). CFV math live. Show exchange listing plan funded by 20% pool.	YOU + Producer	Ep 6 recorded	2,146 (2x)	$280–320M
38	Release Ep 5. WEBINAR 3: “Inside the Portfolio: 12 Coins, the Price Impact, and the 80/20 Engine.” Show order books. Show what $66.7M does per coin. Show wallet/POS roadmap. This creates urgency.	YOU + Analyst	Webinar 3	2,146 (3x)	$320–400M
39–42	VERBAL COMMITMENT SPRINT. Every engaged SAM gets the ask: “If sub docs are ready Day 54, what amount are you committing?” Track in CRM. IC presentations continue: 2/day. 150 calls/day. Record Eps 7–8 (new-state legislator + SAM testimonial).	All 10	Verbal asks	4th pass starts	$400–600M

Weeks 7–8: Lock the Pipeline (Days 43–53)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
43–45	200 calls/day—all closers. “Fund opens in 9 days. We have $XXXM verbal. Remaining capacity filling. Your sub docs can be ready in 24 hours.” Release Ep 7. WEBINAR 4: all 3 legislators, 30 min each. Final Q&A. Announce Day 54 opening.	All callers + Legs.	600 calls, Webinar 4	5th pass	$600–800M
46–49	IC BLITZ: 3/day = 12 this block. You close every $10M+ personally. SAM Director and associates handle sub-$10M. Record Eps 9–10 (coin founder + “Last Call Before Open” with all 3 legs). Social: countdown to Day 54.	YOU + All	12 IC presentations	6th pass	$800M–1B
50–51	Pre-process sub docs for every verbal commitment. IR sends personalized packages to all committed SAMs. You review every package for compliance. Ensure accredited verification ready. Token issuance pipeline on Chia tested.	YOU + IR	Docs pre-staged	Confirmed	$1B+ verbal

52	Record Ep 10: “The Fund Opens Tomorrow.” You + all 3 legislators. Announce opening. Social: countdown final 48 hours.	YOU + All 3 Legs.	Ep 10 recorded	Final calls	$1B+ verbal
53	Final day before open. Personal call from you to every $10M+ verbal. IR confirms data room + sub docs for all. Social: “Tomorrow, the first fundamentals-based crypto fund in history opens.”	YOU + IR	All systems go	Locked	$1B+ verbal

PHASE 3: FUND I OPEN — CLOSE $1 BILLION (Days 54–90)

36 selling days. $1 billion. 5–6 SAMs closing per day at $5–7M average. Verbal commitments convert first. Momentum and FOMO drive the rest. The 80/20 structure, token mechanics, new-client pipeline, price impact thesis, and SB 1649 have been drilled into every SAM for 53 days.

Opening Week (Days 54–60)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
54	FUND OPENS. Process subscriptions in receipt order. Target: 40–50 SAMs execute Day 1 from pre-staged verbals. IR processes all day. You review compliance on every sub doc. Chia token issuance begins. Social: “The CFV CoinFund is open.”	YOU + IR + All	Day 1 closes	40–50	$200–300M Day 1
55–56	Process Day 1 overflow. 150 calls/day to uncommitted verbals: “Fund is live. $XXXM processed Day 1. Your docs are ready.” Announce Day 1 total on social (with permission).	Callers + IR	Processing	60–80	$350–450M
57	Record Ep 11: “The Fund Is Open”—announce, share momentum, discuss deployment timeline for 80% pool. Feature Day-1 SAM if willing. Release same-day.	YOU + Producer	Ep 11 live	90–110	$450–550M
58–60	MOMENTUM PUSH: 150/day. “We’ve raised $XXXM in 5 days. $66.7M per coin hits thin order books soon. 10X potential on most positions. Last chance at ground-floor.”	5 callers	450 calls	110–140	$550–700M

Weeks 9–10: Push to $850M (Days 61–74)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
61–63	WEBINAR 5: Fund I status + deployment timeline + order book analysis + Fund II preview. Release Ep 12 (coin founder post-open). IC presentations continue 1–2/day.	YOU + Analyst	Webinar 5, Ep 12	150–170	$700–800M

64–67	FINAL SWEEP: every non-committed SAM. “Fund I is XX% subscribed. When we close, $66.7M per coin deploys. Fund II is 5X. Ground floor closes soon.” 150/day.	5 callers	600 calls	170–190	$800–900M
68–70	Eps 13–14 (new-state legislator + returning co-host). You personally call every $200M+ AUM non-committed. 3–4 guest spots on external podcasts: “first fund whose model is in state law.”	YOU + Producer	2 eps, guest spots	190–200	$900–950M
71–74	Continue 150/day. Begin 20% pool deployment planning: exchange listing targets, wallet dev contracts, POS API integration timeline, Merkle tree audit vendor selection.	Callers + Analyst	Deployment plan	200+	$950M–1B

Final Sprint (Days 75–90)

Day	Action	Owner	Deliverable	SAMs Hit	$ Pipeline
75–78	CLOSING SPRINT. “Fund I approaching capacity. Final allocations accepted.” Every call is a close. SAM Dir + associates focus on pipeline conversion. You: IC presentations + $10M+ closes.	All 10	Final push	200+	$1B
79–80	Record Ep 15: “The Leapfrog”—announce Fund II ($5B). Fund I closing. Early Fund I LPs get priority. Fund II = $333.3M per coin = another 10X.	YOU + All 3 Legs.	Ep 15	Closing	$1B
81–85	Process final subscriptions. Mop up remaining verbals. Begin Fund I coin deployment: exchange accounts, OTC desks, multi-sig wallet setup. Begin 20% pool disbursements: exchange listing applications for all 12 coins.	YOU + IR + Analyst	Deployment begins	Final	$1B
86–88	Simultaneously: (a) Fund I deployment executing; (b) Fund II materials in development; (c) Exchange listing applications submitted; (d) Wallet dev vendor contracts signed; (e) Merkle tree audit vendor engaged.	All 10	Multi-track	Complete	$1B
89	FUND I CLOSE: Podcast with all 3 legislators. “$1 billion raised. 200+ SAMs. Deployment into 12 coins begins. Exchange listings funded. Wallet/POS integration funded. Fund II opens [date].”	YOU + All 3 Legs.	Close announced	200+	$1B CLOSED

90	All-hands review. $1B raised. 200+ SAMs. 15 episodes. 5 webinars. Social metrics. Brief team on Fund II ($5B). The 80% is deploying. The 20% is building the ecosystem. The leapfrog begins.	All 10	Scorecard	Done	$1B DONE

FUND II: $5 BILLION (Days 91–180)

Fund I's 80% pool ($800M) has deployed $66.7M per coin—permanently locked in multi-sig wallets, never returning to market. Prices have moved—estimated 10X on most coins. The 20% pool ($200M) is funding exchange listings, wallet/POS development, lobbying for SB 1649-style bills in new states, and conferences promoting the 12 coins. Fund I token holders are watching their tokens appreciate. Every SAM who missed Fund I is watching from outside.

Fund II Economics

$5B total. 80% = $4B into coins ($333.3M per coin, locked forever in multi-sig—5X Fund I). 20% = $1B management pool ($250M ops, $150M exchange listings, $200M wallet/POS, $100M ecosystem grants, $200M lobbying, $100M conferences). Expected price impact: another 10X on most coins as $333.3M of permanent buy pressure enters order books that Fund I already thinned. The coins from Fund I are still locked—they never re-enter. Fund II adds another $333.3M per coin of permanent scarcity.

Fund II 90-Day Structure

Days 91–110: Build Fund II materials. Expand SAM list to include mid-market RIAs ($500M–$2B AUM). Fund I performance data is the pitch. Exchange listings from 20% pool are going live—each listing is a news event and a social media post.

Days 111–140: Pre-sell Fund II. IC presentations at scale with Fund I performance charts. Legislators from new states appearing on podcast. Wallet/POS demos showing coins accepted at retail.

Days 141–160: Fund II opens. Process subscriptions. Target: $3–5B from pre-committed pipeline in 20 days.

Days 161–180: Close to $5B. Announce Fund III. Fund II deployment begins. $333.3M per coin entering order books.

FUND III: $15 BILLION (Days 181–270)

$15B total. 80% = $12B ($1B per coin, locked forever). 20% = $3B management. By now: Fund I coins locked ($66.7M/coin). Fund II coins locked ($333.3M/coin). Fund III locks $1B more per coin. Cumulative: $1.4B per coin permanently removed from circulation across all three funds. $16.8B total locked in multi-sig wallets—never returning to market.

LP base expands: SAMs, mid-market RIAs, multi-family offices, endowments, state pension allocators, sovereign wealth fund consultants, crypto-native FOFs. SB 1649-style bills in 5–10 states driven by the lobbying pool. CFV = emerging national standard.

Permanent structure: The funds never dissolve. The coins stay locked. Tokens trade indefinitely among accredited investors. After Year 10, carried interest drops from 20% to 2.1%—making

trading more attractive for token holders while maintaining permanent fund manager revenue. No dumping. No distribution. No redemption of underlying coins. Permanent scarcity.

The endgame: $16.8B of the 12 coins removed from circulation permanently. The 20% pools across all three funds ($4.2B total) have built a global ecosystem: exchange listings in every major market, wallets integrated with every major POS system, lobbying operations in 20+ states, conferences driving merchant and institutional adoption, and ecosystem grants growing the developer communities. The buy pressure raised prices. The permanent lock prevents sell pressure. The ecosystem spending grew fundamentals. All three forces pushed CFV upward. The coins are approaching—and in some cases exceeding—their CFV fair values.

90-DAY KPI DASHBOARD (FUND I)

Metric	Day 14	Day 28	Day 42	Day 53	Day 70	Day 90
SAMs Contacted (1st touch)	0	1,800	2,146	2,146	2,146	2,146

KEY MESSAGING

The One-Liner

“We are the only crypto fund whose valuation model has been voted into state law—naming our benchmark, our formula, and our coins—and every SAM who joins gets new clients, while 80% of every dollar raised buys and permanently holds the coins, and 20% funds the exchange listings, wallets, and POS integrations that make those coins usable everywhere.”

Cold Call (Pre-Open, Days 15–53)

“Hi [Name], I’m calling from the CFV CoinFund. The Arizona State Senate just passed SB 1649, which names a crypto valuation model in state law for the first time in U.S. history—it’s the model our fund uses, and it names 13 specific coins. We’re opening a $1 billion fund where 80% goes directly into 12 coins and is locked in multi-sig wallets. The other 20% funds exchange listings,

mobile wallet development, and Verifone/POS integration so these coins can be spent everywhere credit cards work. And because non-accredited investors must legally invest through an asset manager, every investor who finds us through our podcast and social media becomes your new client. Can I send you the one-pager and the actual bill text?"

Cold Call (Post-Open, Days 54–90)

"Hi [Name], the CFV CoinFund opened [X] days ago. We've raised $[XXX] million from [XX] asset managers. We're putting $66.7 million into each of 12 coins—most have daily volume under $10 million. The order books are thin. Our analysis shows 10X on most positions, and that's just Fund I. Fund II puts $333 million per coin. Fund III puts $1 billion per coin. Plus, 20% of every dollar funds exchange listings and POS integration—we're building the infrastructure that makes these coins usable at every register in America. The fund is [XX%] subscribed. Can I get you on a Zoom today?"

For Compliance Officers

"The CFV model is defined in Arizona SB 1649, which passed the state senate. The four metrics—adoption, transactions, transaction value, developer ecosystems—are codified in Arizona Revised Statutes. The fund deploys 80% into 12 coins held in multi-signature custody meeting SB 1649's secure custody standards: geographically diversified data centers, multiparty governance, end-to-end encryption, code audits, penetration testing. Tokens are issued on the Chia blockchain and trade only between verified accredited investors. The 20% management pool funds exchange listings, Merkle tree audits, wallet development, and ecosystem grants—all activities that increase the coins' fundamental metrics. Attached: full bill text, senate vote record, compliance memo, token mechanics documentation."

The Price Impact & Permanent Scarcity Pitch

"80% of the fund—$800 million—goes into 12 coins equally. That's $66.7 million per coin, locked in multi-signature wallets forever. These coins never come back to market. Never sold. Never distributed. Never redeemed. Permanently removed from circulation. DigiByte trades $3 million a day. Nano trades $2 million. Ravencoin trades $5 million. When $66.7 million of permanent, irreversible buy pressure hits those order books, it absorbs every ask on every exchange. Conservative estimate: 10X. Fund II locks another $333 million per coin—another 10X. Fund III locks $1 billion per coin—at least 5X more. Across all three funds, $1.4 billion per coin is permanently removed from circulation. Meanwhile, the 20% pool lists these coins on every major exchange, builds wallets integrated with Verifone and every major POS system, lobbies for SB 1649-style legislation in 20+ states, runs conferences promoting these coins, and funds ecosystem grants. The permanent buy pressure raises prices. The permanent lock prevents selling. The ecosystem spending raises fundamentals. All three forces push CFV upward simultaneously. Your tokens keep trading indefinitely—carried interest drops from 20% to just 2.1% after Year 10, making trading even more attractive."
